concatenating one or more packet data octets from at least a first data word having at least one packet data octet to be included in a network packet to generate a first sequence of packet data octets having an octet length at least as great as an octet length of a data word;

storing the first sequence of packet data octets in a FIFO buffer operably connected to the output device when the octet length of the sequence of packet data octets is equal to the octet length of a data word; and

storing a first subset of packet data octets from the first sequence of packet data octets in the FIFO buffer and storing a remaining second subset of packet data octets from the first sequence in an alignment register when the octet length of the first sequence of packet data octets

Art Unit: 2462

exceeds the octet length of a data word, wherein an octet length of the first subset of packet data octets is equal to the octet length of a data ~~word~~; word, wherein data received at the alignment register is received from a direct memory access (DMA) component.
